**GP appointments** are for all routine conditions but exclude patients with on-going chronic conditions which require continuity of care from their usual GP, e.g. patients with severe on-going mental health issues.

**Advanced Care Practitioner appointments** are for all routine conditions. However practitioners cannot see patients who are pregnant, children under 2 years of age, and patients with ongoing chronic conditions requiring continuity of care from their usual GP, e.g. patients with severe on-going mental health issues.

**Practice Nurses** provide annual reviews for adults over 16 years old with a long-term condition, e.g. COPD, Asthma, hypertension and cardiovascular disease.

**Health Care Assistants** can carry out blood testing; basic patient observations (monitoring and recording patients' conditions by taking temperatures, pulse, respirations and weight); blood sugar and urinalysis; new and annual patient health checks; and ECG recording. They CANNOT undertake ear syringing or dressings. HCAs will see children 12 and over if accompanied by an adult and 16 years and over unaccompanied.

**Pharmacists** can provide routine medication reviews. They are able to arrange repeat dispensing, action medication changes e.g. hospital discharges, re-authorise medications for the year (where suitable) and advise on lifestyle and statins.

**How to Book:** Patients can book any of these appointments via their practice receptionist as usual
